- The areal extent of the Tengiz reservoir is large, measuring 20 kilometers (12 miles) by 21 kilometers (13 miles).
- TCO completed its Sour Gas Injection and Second-Generation Plant (SGI/SGP) expansion project in 2008. Over the last few years average daily production capacity exceeded 80 thousand metric tonnes per day (640 thousand barrels) of crude oil and 25 million cubic meters per day (870 mmscf) of natural gas.
- In January 2025, TCO reached a significant milestone at Future Growth Project – Wellhead Pressure Management Project (FGP-WPMP), by safely initiating production of crude oil at its new Third-Generation Plant (3GP), which is expected to expand Tengiz's crude oil output by an additional 12 million tons per annum.
- Once all Tengiz facilities are operating at full capacity, TCO's total annual crude oil production is expected to reach approximately 40 million tons per annum, providing incremental value to Kazakhstan through taxes, royalties and other direct financial payments.
- Crude production in the first nine months of 2025 was 30.5 million metric tonnes (about 243.2million barrels).
